Professional Communication Introduction

This lesson discusses professional communication, one of the critical skills every computer science and software engineering professional must master.

This lesson discusses this subject through the following three aspects:

- Technical documents
- Various forms of communication
- Shareholders communication measures

The main focus of this discussion is on how to conduct effective communication at the workplace and with all the shareholders (such as customers, management, other functional teams, as well as your peers) who are related to your professional career and the software products that you create.
